SUMMARY:

Passionate Flutter developer with 2 years of experience, Freelancer delivering high-quality apps and contributing to impactful projects. Currently expanding my expertise by learning Django backend development to become a well-rounded full-stack developer.

EDUCATION:

Alsham Private university

Sep 2021 - Oct 2026

Bachelor of IT Engineer specializing in artificial intelligence

PROJECTS:

Gooaan multi-app food-delivery platform (Flutter)

Apr 2025 - Jul 2025

Built and maintained a unified Flutter codebase powering three production apps, integrating REST APIs, Firebase services, and Google Maps for real-time features and location tracking.

- **User app:** dynamic menu and coupon system, in-app payments, push notifications for every order stage, and live courier tracking on Google Maps.
Try: https://drive.google.com/file/d/15DX6f2G0l_JxG2w-9e7tjr5Y9MQ6MKHp/view?usp=drive_link
- **Deliveryman app:** receives jobs via FCM, uses background GPS to share location, provides turn-by-turn navigation and an earnings dashboard.
- **Restaurant owner app:** lets partners edit menus and inventory, monitors a real-time order queue, draws delivery zones on a map, and sends daily sales reports.

Full Stack Recipe Application | Flutter, Python (Django), Docker, PostgreSQL

Designed scalable Django REST API with Docker, token auth, and TDD; delivered cross-platform Flutter app with advanced state management for dynamic content.

Backend: <https://github.com/firas-mostafa/recipe-app-api>

Flutter: https://github.com/firas-mostafa/recipe_app

SKILLS:

- **Python** → Used for machine learning, backend APIs, automation scripts, and data processing.
- **Dart** → Core language for building mobile, web, and desktop apps with Flutter
- **Flutter** → Build cross-platform mobile apps with a single codebase and modern UI.
- **Bloc** → Implement structured state management with events and streams in Flutter.
- **GetX** → Simplify state management, navigation, and dependency injection in Flutter apps.
- **Firebase** → Add authentication, real-time database, storage, and cloud functions to apps.
- **GitHub Projects** → Mastered GitHub Projects to run agile workflows and accelerate team delivery
- **GitHub** → Host, share, and collaborate on code repositories with version control.
- **Postman** → Test, debug, and document APIs during backend/frontend development
